General

Insulcon's fast growing Wearflex® division offers a wide range of high temperature resistant, flexible and durable quality products. One of these products Wearflex® quilted sleeves.

Wearflex® quilted sleeves are designed to seal all kind of tube penetrations, through the wall or the roof. They are suitable to absorb large axial and lateral movements.

They prevent cold air ingress through the protrusion and can be supplied open or closed, straight or tapered and with or without additional insulation layers.

Wearflex® quilted sleeves are made out of high temperature cloths (Insulcloth 1000S/Refrex®),

All Wearflex® products are being manufactured at our own production facility in Steenberg (The Netherlands).

Wearflex® quilted sleeves are being applied in the petro(chemical) industry.

Advantages Wearflex® quilted sleeves:

- Prevent cold air ingress
- Will absorb large axial and lateral movements
- Are heat resistant up to 900°C
- Will decrease heat loss and therefore reduce energy costs
